FRUIT_get_FlowChart
Date: 11 Dec 2016

Start PHP

'Header' will tell browser that file is in json format

Call to database 'SSL' using PDO

Select variables from table 'fruits' and use 'RAND() LIMIT 2' to order each row

$encoded_json will be echoed to the browser

'Json_encode' will convert file into json format

All steps are completed

Use 'fetchAll()' to return values from $stmt

Execute $stmt

'Prepare' will select values from table 'fruits'

Enter in at least two rows of data into database

No

Do you have at least two rows inside database?

Yes

Continue with next steps
